BLENDER ADD-ON FOR THE LIVE FOR SPEED VEHICLE EDITOR

LFS SRE Tools Quick start

Version 2.0.0, for Blender 4.2 or newer (tested on 4.2 LTS and 5.2). The full illustrated guide comes with the release.

1 **Install.** Drag `lfs_sre_tools-2.0.0.zip` onto the Blender window and press **Install** (or **Edit** › **Preferences** › **Add-ons**, arrow menu, **Install from Disk...**). Keep the zip zipped.

2 **Import. File** › **Import** › **LFS SRE (.sre)** and pick a car from your LFS `data\3dob` folder. Every sub-object becomes one Blender object.

3 **Textures.** Grey car? The LFS tab (press `N`) shows a box: pick your LFS `data\png` folder, for example `C:\LFS\data\png`, and import again.

4 **Look and edit.** Solid view is the model you edit. Material Preview shows the car in the LFS editor's light and catches up with your edits.

5 **New parts.** Model them, give them one of the car's materials, then **Join Selected Into...** in SRE Sub-Objects. **Show** under Smoothing groups shows the shading LFS will use.

6 **Export. File** › **Export** › **LFS SRE** into `data\3dob` and open the car in the vehicle editor. Parts you did not touch are written back exactly; a file you write over is kept as `.sre.bak`.

Slower PC

Preferences of the add-on: switch off *Build it on import* and *Follow your edits*. Build the look later with the button in SRE Import.

Updates

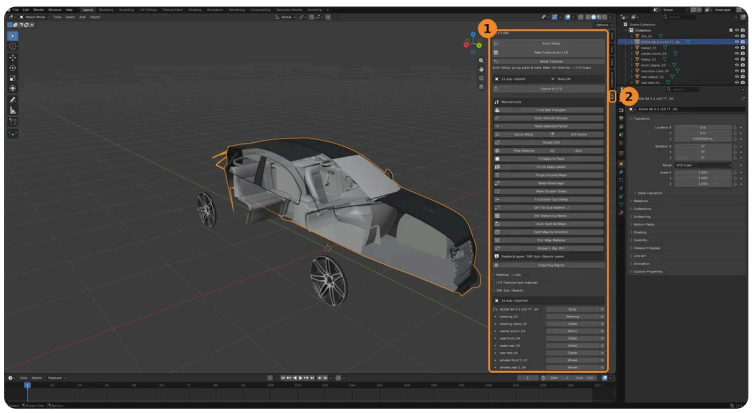

Add the release's update link once: **Preferences** › **Get Extensions**, arrow menu, **Repositories**, **+**, **Add Remote Repository**. Blender then offers new versions.

Older versions

Turn off and remove the old single-file *LFS SRE Exporter / Importer*. The LFS tab shows a red warning while both are on.

Need help?

Copy Bug Report at the bottom of the LFS SRE panel copies what is needed (no file paths). Paste it with your question.

The LFS tab: press `N` over the 3D View to open the sidebar (1), then pick **LFS** on its right edge (2).

LFS SRE Tools by Mk (Discord @byeeeeeeeeeeeeeeeeeeeeeeeeeeeeee), GPL-3.0-or-later. A fan-made tool, not made by or connected to the Live for Speed developers.
